KSE-100 INDEX : Buying rally continues at bourse, KSE-100 surges nearly 1,500 points Bullish momentum continued at the Pakistan Stock Exchange (PSX) as investors cheered the ceasefire agreement between India and Pakistan, with the benchmark KSE-100 Index settling with a gain of nearly 1,300 points on Tuesday. The stock market opened trading on a bullish note with the KSE-100 surging nearly 2,800 points, hitting an intra-day high of 120,067.12. However, the momentum was short-lived as investors resorted to profit taking, market analysts told Business Recorder. Buying returned during the final hours of the trading session, and at close, the benchmark index settled at 118,575.88, an increase of 1,278.15 points or 1.09%. On Monday, the stock market staged a strong comeback, driven by a “convergence of positive developments” including a ceasefire agreement between India and Pakistan, as well as the IMF’s approval of crucial funding.

Glossary of Terms

Support: Support is the level at which the stock is likely to see increased interest from buyers. The buying support will prevent the stock from falling further.

Resistance: Resistance is the level at which the stock is likely to see increased interest from sellers. The selling pressure will prevent the stock from rising further.

RSI: The Relative Strength Index (RSI) is a momentum oscillator that ranges from 0 to 100. It compares the extent of the stock's recent price movements by evaluating recent gains and losses. Stocks with RSI above 70 could be considered overbought, and below 30 could be considered oversold. Generally, if the RSI falls below 70, it is a bearish signal. Conversely, if the RSI of a stock rises above 30 it is considered bullish. The RSI used is of 14 days.

Bollinger Bands: A Bollinger Band, developed by famous technical trader John Bollinger, is plotted two standard deviations away from a simple moving average. BB is a highly popular technical analysis technique. Many traders believe the closer the prices move to the upper band, the more overbought the market, and the closer the prices move to the lower band, the more oversold the market.

MACD: MACD shows the relationship between a longer period moving average and a short period Moving average of a stock's price. Generally, the 26-day exponential moving average (EMA) and the 12-day EMA are used to calculate MACD.

EMA: Exponential moving average (EMA) is the weighted average of the prices of a given security where higher weights are given to recent data points. EMA is used to analyze the trend of a stock.

SMA: A simple moving average (SMA) is the average of the closing price of a security for a given period. The parabolic SAR: is a technical indicator used to determine the price direction of an asset, as well as draw attention to when the price direction is changing. Sometimes known as the "stop and reversal system," the parabolic SAR was developed by J. Welles Wilder Jr., creator of the relative strength index (RSI).
